### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### ***Response to Amendment***

The declaration under 37 CFR 1.132 filed February 4, 2009 is partially sufficient to overcome the rejection of claims 1-10 and 14-17 based upon Merger et al. in view of Aoki et al. See discussion below.

### ***Allowable Subject Matter***

Claims 1-10 and 14-17 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 1 is directed towards a polyaldimine prepared from an aliphatic polyamine and an aldehyde of a specific formula. The aldehyde is the reaction product of a beta hydroxy aldehyde and a carboxylic acid that is either a carboxylic acid having a 11 to 30 carbon containing alkyl group, a dicarboxylic acid with 2 to 16 carbon atoms or an ester of the same dicarboxylic acid.

As described in the final rejection (May 5, 2008) the combination of Merger et al. and Aoki et al. renders the embodiment using a long chain alkyl group obvious (see pages 2-3). The addition of the limitation "wherein the polyaldimine is odorless" in combination with the declaration under 37 C.F.R. § 1.132 has overcome this rejection. Aoki et al. does not contain any disclosure as to the odor of the polyaldimine. Merger et al. does disclose an odorless polyaldimine (9:18-35) but their solution involves a completely different aldehyde than one of the claimed structure. The absence of property which a claimed invention would have been expected to possess based on the teachings of the prior art is evidence of unobviousness. *Ex parte Mead Johnson & Co.* 227 USPQ 78 (Bd. Pat. App. & Inter. 1985). See MPEP §716.02(a).

Merger et al. additionally does not provide any indication that the alkyl chain length is a result effective variable, and in fact the preferred embodiments use alkyl chains of 1 to 4 carbon atoms 3:65-4:7). As Merger et al. teaches desirability of short drying times (Example 18), a person having ordinary skill in the art at the time of invention would have been motivated to use low molecular weight compounds that would be quickly removed from the coating. As the declaration shows that an polyaldimine having 10 carbon atoms in the alkyl chain (the highest amount disclosed in

Merger et al. ) still has low to medium odor while one with 11 carbon atoms has no odor, the criticality of the claimed alkyl chain length has been established. While it is known in the art that higher molecular weight compounds have lower vapor pressure and therefore less odor (see e.g. Merger et al. 9:18-35), the art of record does not sufficiently teach the criticality of the claimed alkyl chain length.

Novak et al. (US Pat. 4,886,618) teaches reacting an aldehyde formed from the reaction of a beta-hydroxy aldehyde with a monoamine to form an imine functionality (3:35-40 and 4:64-68). However, as Novak et al. is directed towards oxygen scavengers rather than curing agents as in Merger et al. and Aoki et al. there is no suggestion in the prior art of record to react the aldehyde of Novak et al. with a polyamine with aliphatic amine groups as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
